DETAILED ACTION

1. The amendment filed 1/22/08 has been received and considered. Claims 1–5, 7–12, and 14–22 are presented for examination.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
3. Authorization for this examiner's amendment was given in a telephone interview with Robert P. Lord on 5/7/08.
4. The application has been amended as follows:
5. In the specification on page 11, paragraph [0043], line 4, the term "optimized node to" has been replaced with the term --optimized nodes to--.
6. Claim 1 line 10, the term "when debugging is selected" has been deleted.
7. Claim 8 line 14, the term "when debugging is selected" has been deleted.
8. Claim 15 line 1, the term "A system for verifying a simulation image, comprising:" has been replaced with the term --A computer system for verifying a simulation image, comprising: a processor; a memory; a storage device;--.
9. Claims 1 and 8 have been amended to circumvent 112 issues.

10. Claim 15, has been amended to circumvent 101 issues. Examiner notes that only the term “A computer system for verifying a simulation image, comprising: a processor; a memory; a storage device;” was enabled by the application description (see claim 8).

Allowable Subject Matter

11. Claims 1–5, 7–12, and 14–22 are allowed over prior art of record.

12. The following is an examiner’s statement of reasons for allowance:

While Ping-Sheng Tseng, (Tseng (2) hereinafter), U.S. Patent 6,785,873 discloses removing nodes from the simulation image to produce an optimized image and an optimized nodes image (see col. 26, lines 62–65),

Segal, Russell B., (Segal hereinafter), U.S. Patent 6,496,972 teaches wherein the optimized nodes image comprises information about the nodes removed from the simulation image (see col. 16, line 48 to col. 17, line 11),

Eisenhofer et al., (Eisenhofer hereinafter), U.S. Patent 6,108,494 discloses an optimized nodes image comprising information about the nodes removed from the simulation image (see “boundary nets database” in col. 8, lines 11–16),

and Moriguchi et al., (Moriguchi hereinafter), U.S. Patent 6,088,821 discloses a method wherein removing nodes from the simulation image further comprises moving at least one sequential element to use an input of the optimized nodes image as an output of the optimized nodes image (see col. 3, lines 14–19; col. 9, line 64 to col. 10, line 8; and Fig. 10),

none of these references taken either alone or in combination with the prior art of record discloses claims 1, 8, and 20 "wherein the reconstructed simulation image comprises the optimized image and the optimized nodes image" as well as claim 15 "providing functionality to provide the reconstructed simulation image using the optimized image and the optimized nodes image", in combination with the remaining elements and features of the claimed invention.

Also, there is no motivation to combine none of these references to meet these limitations. It is for these reasons that applicant's method defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

13. Applicant's arguments filed 1/22/08 have been fully considered and they are persuasive.

Conclusion

14. Examiner would like to point out that any reference to specific figures, columns and lines should not be considered limiting in any way, the entire reference is considered to provide disclosure relating to the claimed invention.
